Education

University of Southern California Los Angeles, USA Master of Science in Computer Science (GPA: 3.7/4)	August 2023 – May 2025
MS Ramaiah University of Applied Sciences Bangalore, India Bachelor of Technology in Computer Science and Engineering	August 2017 – June 2021

Work Experience

Software Engineer, Easley Dunn Productions Los Angeles, USA – Shipped a diegetic floating UI for in-headset tools and scene switching, increasing user interaction by 20% – Implemented physics-driven tool interactions to mirror real surgical handling, improving task completion during early user testing – Architected a VR surgical training prototype in Unity (C#), developing a JSON-based session record-and-replay system that enabled post-training playback, helping users identify procedural errors and improve surgical technique through iterative practice	June 2025 – Present
Founding Software Engineer - Full Stack, Redvest Los Angeles, USA – Architected multithreaded Python ingestion pipelines for real-time financial analytics, cutting end-to-end data latency by 40% – Deployed containerized backend services on AWS EKS using Node.js, TypeScript, and Python, with automated monitoring that eliminated 60% of manual reconciliation work – Led backend and API feature development with automated test coverage and reliability fixes, boosting user engagement by 20% – Delivered real-time analytics dashboards in React and TypeScript to visualize financial and KPI metrics, supporting a live product demo at TechCrunch Disrupt 2024	May 2024 – October 2024
Software Engineer, American Express Bangalore, India – Engineered distributed ETL pipelines in Python, PySpark, PL/SQL, and Hive, with automated cross-system validation that achieved 100% daily reconciliation accuracy across OFSAA, Oracle, and MongoDB – Migrated 30+ RBI data-localization rules into the validation pipeline, cutting regulatory compliance risk by 50% – Optimized high-volume PL/SQL procedures with automated data-quality checkpoints, cutting recurring production failures by 20% – Built internal REST APIs and multithreaded Java automation tools with automated report validation, supporting 50K+ daily transactions and saving 20+ hrs/week – Mentored 2 junior engineers on PL/SQL and ETL best practices, and partnered with QA to add regression coverage for critical reconciliation jobs	January 2021 – July 2023

Projects

Product Review Aggregator AI Agent – Architected a distributed AI product-intelligence system that aggregates multi-source reviews and pricing data, using automated LLM evaluation to extract sentiment and surface structured insights in near real time – Built a Qdrant -backed RAG pipeline with retrieval validation and LangGraph-style agent orchestration on Celery and Redis for scalable, fault-tolerant processing	
US Stock Market Portfolio – Built RESTful backend services in Node.js, TypeScript, and Express for real-time stock data, portfolio tracking, and price analytics, optimizing MongoDB queries to cut API response time by 20% – Shipped a React/TypeScript web app and a companion Android app on a shared backend API layer , deployed on AWS for consistent multi-client behavior	
Multi-LoRA(Low Rank Adaption) Integration Pipeline – Engineered a multi-adapter LoRA blending system for diffusion models to preserve character identity across AI-generated images, cutting feature mixing by 58% – Applied region-based attention control on the FLUX diffusion model, validating gains via CLIP alignment and ArcFace identity metrics across large-scale GPU experiments	

Research Papers

- **Trip Planner and Recommender using Flutter and Tensorflow** - "IEEE, 2022"
- **Conceptual Model Simulation to Detect and Report City Traffic Violations Using Distributed Intelligent Agents** - "IEEE, 2021"

Skills

Languages: Python, Java, C, C++, SQL, JavaScript, TypeScript, React.js, Angular, C#, Dart
Core: Distributed Systems, Multithreading, Memory Management, REST APIs, GraphQL
Backend: Node.js, Flask, Django, Express.js, Event-Driven Architecture, WebSockets
AI Systems: LLM Evaluation, Generative AI(LLMs), RAG, LangChain, LangGraph, Qdrant, Agentic AI, Diffusion Models
Cloud & DevOps: Kubernetes, Docker, AWS(EKS, EC2, S3, Lambda), Google Cloud(GCP), Microsoft Azure, Terraform, CI/CD
Data Engineering: PySpark, Hive, PostgreSQL, MongoDB, Redis, PL/SQL, MySQL
Testing: GitHub Actions, Pytest, Playwright, Selenium, API Testing, Unit Testing, Regression Testing, Automation Frameworks
